Table determining the storage distance and number of carriers	10, 11

### General

VAHLE-Festoon systems support electric cables or hoses for mobile machinery.

The cable carriers contained in this catalog comply with VDE regulations. Diamond tracks are especially well suited for curved installations.

### Application

Cable carriers ride on the square bar parallel to the traversing track of the equipment. This arrangement ensures that the total length of equipment (e.g. hoist, crab, trolley, etc.) is used as storage distance for the carriers (see sketch below). The first carrier (lead carrier) is connected to the equipment by an outrigger and towed along the diamond track.

All carriers are connected to each other via the cables or hoses installed. Depending on the cable/hose package, the loop, the speed, the acceleration and the type of curve radii it might be necessary to consider tension relief elements.

Important for proper performance:

- a) Consider min. permissible bending radii of cables
- b) Consider a cable loop safety length of 10-15% for straight runs and 20% for curved tracks.

### Layout

The types of cables are determined according to the required number of conductors and the current load of the equipment (see cat. 8L). The dimensions of cables are the basis for the selection of the carrier type. The length of cable results from active travel distance plus storage distance, extra safety length plus end connections (see installation information).

Consider a multiplier of 0.7 x smallest radius for the maximum permissible cable loop in curved installations. The maximum permissible speed depends on the total amount of curve angles.

For systems specification please refer to the example for ordering in this catalog.

We welcome your inquiry on your particular application. Kindly consult your local Vahle agent or the factory using the questionnaire and submitting a system layout.

Name and Address of Customer: \_\_\_\_\_

Ref.: \_\_\_\_\_

1. Type of Application \_\_\_\_\_

2. Outdoors  indoors  \_\_\_\_\_

3. Temperature range \_\_\_\_\_ ° C min. \_\_\_\_\_ ° C max. \_\_\_\_\_

4. Is round or flatform cable envisaged? \_\_\_\_\_

5. How much space is available for storage? \_\_\_\_\_ mm

6. Is it possible to extend the track for the festoon cable system in case the length of equipment is insufficient for storage space?  
 Yes, by \_\_\_\_\_ mm,  no, not possible.

7. Special operating conditions: \_\_\_\_\_

8. Length of crane trolley: \_\_\_\_\_ mm

9. Travel distance of crane trolley: \_\_\_\_\_ mm

10. Travelling speed: \_\_\_\_\_ m/min.

11. Max. loop depth: \_\_\_\_\_ mm

12. Further details: \_\_\_\_\_

\_\_\_\_\_

**12. Required cables:**

No. of cables	No. & size of conductors	ø mm	width x thickness of flatform cables

Please, submit the completed Questionnaire together with your inquiry. Your system layout drawing will be appreciated in case of curves.

# V 3 TRACK AND ACCESSORIES

## Track

<b>Type</b>	<b>V 3</b>
Order- No.	360 196
Order- No. for bending	360 026
<b>For cable carrier</b>	<b>WV 3</b>
Material	steel
Surface protection	galvanized
Supply lengths	6 m
<b>Standard support spacing</b>	2 m (1 m in storage section and curves)
Moment in inertia Jx	2,94 cm <sup>4</sup>
Section modulus Wx	1,39 cm <sup>3</sup>
Weight	1,77 kg/m

### Other support centers and permissible area loads

Support spacing	1 m	1,5 m	2 m	2,5 m	3 m	3,5 m
perm. area load	111 kg	74 kg	47 kg	30 kg	21 kg	15 kg

## Joint clamp

Type	WV 3
Order- No.	360 018
Material	steel/aluminium
Surface protection	galvanized
Weight	0,125 kg

torque moment 10 Nm

## End cap

Type	K 30
Order- No.	360 023
Material	polyethylene
Weight	0,008 kg

## Hanger

underhung

Type	ADV 3
Order- No.	360 019
Material	steel/aluminium
Surface protection	galvanized
Weight	0,11 kg

torque moment 10 Nm

## Hanger

underhung for HK support

Type	AKV 3
Order- No.	360 020
Material	steel/aluminium
Surface protection	galvanized
Weight	0,19 kg

2 bolts M 6 x 30, order- No. 360 030 to be ordered separately

## Support bracket

Dim A depends on width of machinery (e.g. crane trolley). Make sure that hoist wheels have enough clearance.

Type	Material	Surface protection	Weight kg	A (adjustable) mm	L mm	max. B mm	Order- No.
<b>HK 200</b>	steel	galvanized	0,980	200	400	210 <sup>(1)</sup>	310 220

<b>HK 400</b>			1,290	400	600	210 <sup>(1)</sup>	310 240
<b>HK 500</b>			1,430	500	700	210 <sup>(1)</sup>	310 250

Our delivery: 1 pair of claws and track S1. Hangers AKV 3 to be ordered separately.

# ACCESSORIES AND CABLE CARRIERS FOR V 3 TRACK

## Claw for HK

Type	SP
Order- No.	310 390
Material	steel
Surface protection	galvanized
Weight	0,200 kg

Flat nut M 8 separately available  
Order- No. 310 955.

## Support Attachment for HK

Type	AH 1
Order- No.	310 400
Material	steel
Surface protection	Hardware galvanized
Weight	0,460 kg

Bracket bars and hangers to be ordered separately.

## Bracket bars for HK

Type	Material	Surface protection	Weight kg	L mm	Order- No.
S 1 - 400	steel	galvanized	0,620	400	310 600
S 1 - 500			0,780	500	310 610

# EXAMPLE FOR ORDERING

## Inquiry: Hoist on track per drawing – Indoor Installation –

Travelling speed:	30 m /min.
Cables:	1 PVC-flatform (K) H 07 VV H 2 - F 4 G 4 (7,1 x 22 mm) 1 PVC-flatform (K) H 07 VV H 2 - F 8 G 2,5 (5,9 x 35,7 mm)
max. Cable loop depth:	1 m (per structural environment)
required hookup cable end connections:	1 x 2 m + 1 x 5 m

### How to select the correct system:

- Calculation of lead carrier's active travel  
 $3000 \text{ mm} + \frac{2 \times 1000 \text{ mm} \times \pi \times 90^\circ}{360^\circ} + 1000 \text{ mm} + \frac{2 \times 1300 \text{ mm} \times \pi \times 180^\circ}{360^\circ} + 3000 \text{ mm} = \mathbf{12660 \text{ mm}}$
- Max. permissible cable loop depth (see page 9)  
 $0,7 \times R_{\min.} = 0,7 \times 1000 \text{ m} = \mathbf{700 \text{ mm}}$   
 ( $R_{\min.}$  = smallest curve radius of the system)
- Checking the travelling speed (see diagram page 9)  
 Total of curve angles:  $90^\circ + 180^\circ = 270^\circ$   
 Smallest curve radius: 1000 mm  
 That means okay for max. travelling speed of  $\mathbf{30 \text{ m/min.}}$
- Selection of carriers (see page 5)  $\mathbf{WV 3-25 F/50-110}$
- Find out the quantity of carriers required (see diagram, pages 10/11)  $\mathbf{11 \text{ Stück}}$
- Find out the storage distance (see page 10) plus 1 carrier length open space  
 $1350 \text{ mm} + 110 \text{ mm} = \mathbf{1460 \text{ mm}}$
- Find out length of each strain relief chain (see formula page 7)  
 $X = \frac{(12\ 660 \times 1,05) + 110 \text{ mm}}{12} = 1117 \text{ mm}$   
 Total chain length:  $12 \times 1117 \text{ mm} = 13404 \text{ mm} \approx \mathbf{ca. 14 \text{ m}}$
- Length of cable required (chain length + storage distance) x cable loop safety length + 7000 mm for hockup cable end connections  $(12\ 660 + 1460 \text{ mm}) \times 1,2 + 7000 \text{ mm}$  for connections  $\approx \mathbf{ca. 24 \text{ m}}$

### Material to order:

storage distance (mm) w/o factor Z			

1. The active travel distance of the lead carrier to be plotted on the horizontal axis (equals the machinery travelling distance with straight runs; in case of curves see runway calculation on page 8).
2. Draw an upward vertical line from this point.
3. Where this vertical axis upward intersects with the sloping line (loop depth; also see formula on page 9) now draw a horizontal axis to the left.

For straight runs → machinery travelling distance in meters  
 For curved runs → active travel distance of lead carrier in meters

# DETERMINING STORAGE DISTANCE AND NUMBER OF CARRIERS

4. There, at the vertical axis you find the required number of carriers, track clamp and lead carrier not included. Always select the next larger quantity when your line ends up between two numbers.

5. The table on the left shows the required storage distance for the chosen type and number of carriers (considering all carriers, 1/2 of lead carrier and 1/2 of track clamp pushed closely together). Allow approx. one carrier length for the open space Z (see details on page 3).
