

**COMPACT
CONDUCTOR SYSTEMS
VCL2 | VCL3**

YOUR VISION – OUR SOLUTION

3D | EN | Rev.02

GENERAL

The two-pole compact conductor system VCL2 was developed specifically for various intralogistics applications. With its compact size and durability, the VCL2 possesses the ideal properties for small parts warehouse shuttle applications or for other transfer carriages. Additionally, installing VCL2 is simple due to minimal parts and an easy clip-fastening system.

SAFETY

The compact conductor system, VCL2, has been designed according to VDE 0100. It complies with current conductor system safety requirements and is protected against accidental contact according to VDE 0470, part 1 (protection class IP 2X).

The current collectors are protected against contact only if the carbon brushes are fully located in the conductor rails. For conductor rail systems located at arm's length, where under normal operation the current collectors leave the conductor rails, contact protection must be provided on site, e. g. by means of barriers or by switching off. This, however, only applies to voltages above 25 volts AC or 60 volts DC.

Fig. 1 shows that the VDE finger cannot touch live parts. The insulation rail covering the conductor rail offers good insulation for maximum safety. Any number of conductors can be installed side by side at minimum space requirement.

Standard rail sections are 4 m long, but shorter sections are available. The ground conductor is yellow, marked with a continuous green stripe at the insulating housing.

Fig 1: VDE finger

APPLICATION

For indoor systems with travel speeds of up to 300 m/min.

HANGERS

The maximum support distance between the hangers is 0.8 m.

JOINTS

Joints are used for the electrical and mechanical connection of the conductor rail sections. Every joint is protected against contact with a joint cap

APPROVALS

UL approval in preparation.

EXPANSION

System lengths of up to 150 meters can be installed without additional expansion sections.

FEEDS

The feeds can be realized as an end feed via the transfer guides or on the line as a line feed.

TRANSFER GUIDES

Transfer guides are the contact-protected ends of the conductor rails at the end of the lines and mechanical line interruptions (switches, dropout sections, etc.). Transfer guides are available with or without feed capability.

CURRENT COLLECTORS

The current collectors are manufactured from impact-resistant plastic and stainless steel parts. The current is drawn via a carbon brush.

The length of the current collector connection cable may not exceed 3 m if the downstream overcurrent protection device is not designed to handle the capacity of the connection cable. Refer also to DIN VDE 0100, part 430 and DIN EN 60204-32. (Note: this is often the case if more than one collector is used in the system).

The cross section of the supplied connecting cables is designed for the stated nominal currents. The reduction factors according to DIN VDE 0298-4 must be observed for the various laying procedures.

According to DIN EN 60204-1 and DIN EN 60204-32, the continuity of the ground conductor system via sliding contacts must be ensured using suitable measures. As a simple and suitable measure, it is recommended to double the PE current collector.

SAFETY INFORMATION

To avoid pinching, ensure that the arrangement of the conductor system and current collectors / tow arms provides a minimum distance of 0.5 m between fixed and mobile plant parts.

STANDARD DESIGN FOR SHUTTLE APPLICATION

48V DC, 50 A

EXAMPLE OF 80 METER LINE

TECHNICAL SPECIFICATIONS

ISOLATING PROFILE

Electrical values: Dielectric strength according to DIN 53481	Specific resistance according to IEC 60093	Surface resistance according to IEC 60093	Comparative tracking index according to IEC 60112	Service temperature*	Flammability

MOUNTING ACCESSORIES FOR VCL2

TABLE SAW

For cutting insulating profile and conductor rails with length stop. Connection: 230 Volt, 50 Hz.

Type	Weight kg	Order No.
Table saw KS 10	6.500	165276
Spare Blade SB	0.070	165263

HEXAGON SOCKET SW 4

Type	Weight kg	Order No.
Hexagon screwdriver 4 mm	0.036	2812962

MOUNTING HANDLE FOR PLUG-IN JOINT CONNECTOR

Type	Weight kg	Order No.
MZ-MGF100	0.010	2809348

DEBURRING TOOL FLAT BLUNT FILE FSF

For deburring the outside of the conductor rail in case of shorter sections.

Type	Weight kg	Order No.
Flat blunt file FSF 150 x 16 x 4	0.085	2812964

SCREW DRIVER PH1

Type	Weight kg	Order No.
Phillips screwdriver PH 1	0.014	2812963

QUESTIONNAIRE

Company: _____ Date: _____
 Phone: _____ Fax: _____
 Email: _____ Website: _____

1. Number of wiper line systems: _____
2. Type of crane or device to be fed: _____
3. Operating voltage: _____ volt Phases: _____ frequency: _____ Hz
☐ Three-phase voltage ☐ AC voltage ☐ DC voltage
4. Line length: _____
5. Number of phase rails: _____ N-rails: _____ Control rails: _____ Ground conductor: _____
6. Installation position of the wiper line:
☐ Hanging wiper line / current collector cable downwards
☐ Hanging wiper line / current collector cable lateral entry⁽¹⁾
☐ Hanging distance _____ m (max. 2 m) ☐ Other: _____
7. Number of cranes or devices in a wiper line system: _____
8. ☐ Indoor system ☐ Outdoor system
9. Special operating conditions (moisture, dust, chemical influences, etc) _____
10. Ambient temperature: _____ °C min. _____ °C max.
11. Position and number of feeds⁽¹⁾: _____
12. Position and number of disconnecting points (e.g. for repair zones)⁽¹⁾: _____
13. Where is the wiper line to be positioned?⁽¹⁾: _____
14. Screw consoles to be supplied: ☐ yes ☐ no Distance middle of carrier – middle of wiper line _____
 Flange width of carrier: _____
15. Travel speed for longitudinal travel: _____ in bends: _____ at transfers: _____
16. Current consumption of the individual electricity consumers: _____
 (Please use the table below.)
17. Max. voltage drop from conductor rail feed to the current collectors and considering the start-up currents:
 3% ☐ or _____ % in relation to nominal current.

Motor data	Crane/device 1							Crane/device 2						
	Power kW	Nominal current			Start-up current		Drive type ⁽²⁾	Power kW	Nominal current			Start-up current		Drive type ⁽²⁾
		A	cos φ _N	% duty	A	cos φ _A			A	cos φ _N	% duty	A	cos φ _A	
Lifting device														
Auxiliary lifting device														
Carriage														
Trolley traveling winch														

Mark motors that can be switched on at the same time with an *.

Mark motors that can start up at the same time with Δ.

Further information: _____

Signature: _____

(1) Outline drawing required for offer preparation

(2) Enter drive type: K for squirrel-cage rotor, S for slip ring rotor, F for frequency-controlled motor

We reserve the right to make changes due to further technical development.

Please copy questionnaire and send by fax.
