Type KSLT
color: gray

Type KSLT
with sealing strip „D“

Type KSLT
with plastic shielding „FP“

General

The Powerail types KBSL, KSL and KSLT are totally enclosed, touch-proof conductor systems for safe mobile power feeding of: Overhead Cranes, Monorail Systems, Electric Hoists, Automated Storage and Retrieval Systems, Electric Power Tools, Machine Tools, Assembly and Test Lines, Hanger Door Motors, Studio & Station Lighting Systems and many other applications.

These Powerail can be used for indoor and outdoor applications.

Because of the more favourable thermal properties we recommend to use a Powerail type with gray housing (KSLT/KSG) for outdoor applications.

Main characteristics are minimum space requirement, easy installation and resistance against corrosion.

VAHLE Powerails fully meet all VDE safety requirements.

Other combinations of cross sections, as shown on page 5, are possible. Regulation VDE 0100, part 430 has to be considered when using an N-conductor. Powerail KSLT can be equipped with sealing strip „D“ (IP 24) or with plastic shielding „FP“. Touch-proofness is then given with (EN 60529 (VDE 0470 part 1)). It is protected to IP 23 standards.

The touch-proofness is only guaranteed if the collectors are totally inserted into the Powerail system. If the Powerail is mounted within easy reach and the collectors can leave the system during operation, protection against manual contact must be provided. This is valid for tension above 25 V three phase current and 60 V alternate current.

BASIC DESCRIPTION OF POWERAILS AND COMPONENTS

Apporovals

KSL: UL-approved.
KSL/KSLT: CSA-approved on request before placing the order.

Housing

The compact insulating housing holds from 4-5 pure copper conductors. KBSL preferably for indoors, all others for in- & outdoor use.

Standard sections are 1, 2, 3 or 4 m long.

Other sections and curves are available.

The ground conductor is identified by international color code. Long and short lip housing profiles (see page 6) and collector safety keys avoid phase reversing.

Any number of conductors can be accomplished by installing various Powerails side by side.

Couplings:

The KBSL, KSL and KSLT can be supplied from 40 - 100 A alternatively with bolted joints or plug-in joints. With 140 and 200 A bolted joints are always needed. The sections for plug-in and bolted joints are identically constructed.

Joint cover

The housing of the Powerail types KBSL, KSL and KSLT are connected by plastic joint covers.

Main power supply:

The Powerail systems can be fed either by line feeds or end feeds.

End caps:

The open ends of Powerail are closed by end caps.

Hangers:

Standard brackets for Powerail attachment to crane girders are available (see page 8). The Powerail lies in fixpoint or sliding hangers. The max. support distance for interior installations is 2000 mm and for exterior installations 1333 mm.

Expansion during temperature fluctuation:

The extensions can be compensated for the KBSL, KSL and KSLT by expansion joint sections (without electrical separation).

Anti-condensation sections:

These sections are used for transfer of the Powerail to outdoor areas to avoid condensation. The Powerail is not separated electrically.

Contact sections, turntables and switches:

Powerail for working areas and transfer applications see page 12.

Sectionalizing:

Available in air gap version, where the collector carbon bridges the gap, e.g. for mains.

Also available in insulating piece version. In this case the insulating piece is longer than the carbon and each Powerail section can be separated electrically, e.g. for control.

Collector:

The current collectors are made of re-inforced polyester, for high strength and light weight. Spring loaded carbon brushes maintain uniform contact. Connecting cables or terminal boxes and hinged or flexible towing arms included. Double collectors for transfer applications and higher amperage.

The length of the collector cable may not exceed 3 m if the added overcurrent protection device is not designed for the load capacity of this cable. Please refer also to regulations VDE 0100, part 430 and EN 60204-32.

(Note: this might happen in case of several collector running in one system).

The connecting cables are sufficiently dimensioned for the indicated continuous current ratings.

Consider reduction factors for different kinds of installation as per VDE 0298-4.

Please note: For use in galvanizing and pickling plants, under aggressive conditions and low voltage applications we would appreciate receiving detailed information, especially of the environmental conditions. For quotations and order processing including Powerail systems with curves, dead sections, turntables, switches etc. we require your drawings or sketches. Please use our questionnaire, page 29/30.

All steel parts and hardware of Powerails can be supplied in stainless steel version (version K)

Technical Data of Powerail KBSL · KSL · KSLT			
Electrical properties:		Mechanical properties:	
Dielectric strength	IEC 60243-1-3 30–40 kV/mm	Flexible strength	75 N/mm ² ± 10 %
Specific resistance	IEC 600935 x 10 ¹⁵ Ohm/cm	Tensile strength	40 N/mm ² ± 10 %
Surface resistance	IEC 6009310 ¹³ Ohm	Temperature range (ambient):	- 30 °C to + 60 °C
Leakage resistance	IEC 60112CTI 600–2,7		
Permissible operating voltage	600 V		
Flame test proof:			
no flaming particles, self extinguishing	DIN 41 02 – Class B 1 Part 1	Housing Resistance to chemicals: at + 45 °C	Gasoline Mineral Oil Grease Sulphuric acid 50 % Caustic soda 25 % & 50 % Hydro-chloric acid, concentrated

Consider the voltage drop calculation to maintain the limits established by the motor manufacturers:

AC:

$$\Delta U = \sqrt{3} \times I \times l \times Z$$

DC:

$$\Delta U_1 = 2l \times I \times R$$

ΔU_1 = Voltage drop [V]
 ΔU_2 = Voltage drop [%]
 I = Ampere load [A]

$$\Delta U_2 = \frac{\Delta U_1 \cdot 100}{V}$$

R = Resistence [Ohm/m]
l = Power feed length [m]
L = System length [m]

Effective length:

- $l = L$ power feed located at the end of the system
- $l = L/2$ power feed located at the mid-point of the system
- $l = L/4$ power feed located at both ends of the system
- $l = L/6$ power feed located at $L/6$ from each end of the system
- Z = Impedance Ohm/1000 m
- V = Voltage rating [V]

The total ampere load is determined from the nominal rated current of all motors working simultaneously on the same feed section of your electrification system. A diversity factor of 0.5 – 0.9 can be considered.

The conductor size and/or number of feed points should be increased or booster cables should be used in parallel in case the drop is exceeding the limitations.

ANTI-CONDENSATION SECTIONS⁽¹⁾

incl. 1 m section

This anti-condensation-section consists of 1 m Powerail with openings covered by a protection hood. The anti-condensation section does not disconnect the powerail electrically.

Application of Anti-Condensation Section:

The anti-condensation section will be used where Powerails are passing from indoor to outdoor, preventing condensation of the outside mounted Powerail. The warm air from indoors can escape through the anti condensation section.

Feeding

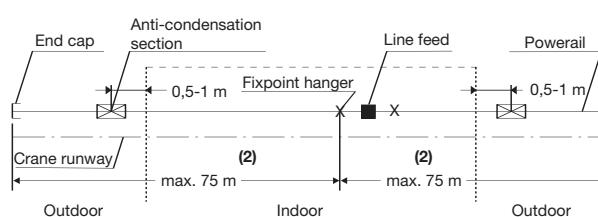

No extra feeds required as the Powerail is not interrupted.

Collectors

No extra collectors required.

Installation

The anti-condensation section is to be placed directly (0,5 m - 1 m max.) at the transfer point from indoor to outdoor. See sketch.

for KBSL and KSL

⁽¹⁾ Above sections come ready assembled on 1 m Powerail and are a part of the system length.

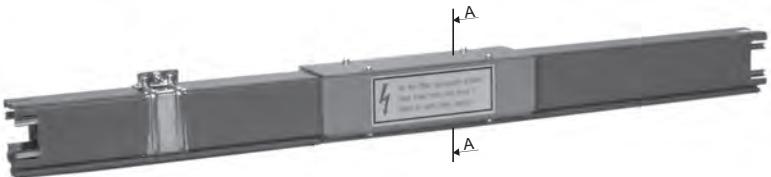

⁽²⁾ For longer runs use Expansion joint section (see page 17).

⁽³⁾ Suffix types e.g. BTK 4/60 w/ PE → BTK 4 /60 HS Order-No. 258 652

TELESCOPE SECTIONS⁽¹⁾

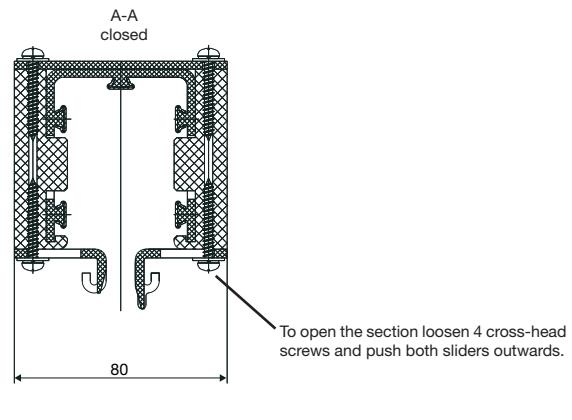

incl. 1 m section

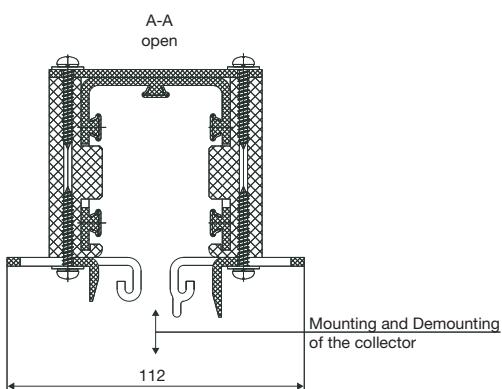

Assembly and disassembly of the collector is possible at the end of the track as well as at the removing section.

With plants with frequent maintenance procedures or several current collectors in a system (e.g. test plants) removing sections are to be planned.

For single collectors

By opening and closing the sliders at the bottom of the powerail housing the collector can be mounted and demounted easily.

Before opening disconnect mains.

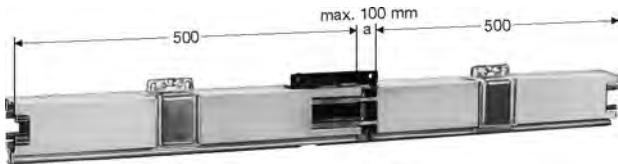

The removing section does not disconnect the powerail electrically.

⁽¹⁾ Above sections come ready assembled on 1 m Powerail and are a part

⁽²⁾ Suffix types e.g. TKL 4/60 w/ PE → TKL 4 /60 **HS** Order-No. 250 850.

EXPANSION JOINT SECTIONS⁽¹⁾

incl. 1 m section

Expansion joint sections are required to compensate for expansion and contraction of KSL Powerail in varying temperatures without interrupting electrical power.

Sealing strip "D" and plastic shield "FP" of the KSLT are interrupted within the range of the expansion joint section.

The expansion joints are used if the Powerail length between two curves, switches or other fix points is exceeding 20 meters, or corresponding to a temperature difference (Δt) of

$$\Delta t 20^\circ \text{ C} = 100 \text{ m}$$

$$\Delta t 30^\circ \text{ C} = 68 \text{ m}$$

$$\Delta t 40^\circ \text{ C} = 50 \text{ m}$$

$$\Delta t 60^\circ \text{ C} = 34 \text{ m}$$

$$\Delta t 80^\circ \text{ C} = 25 \text{ m}$$

Adjacent sketches, Fig. 1 and Fig. 2 show this type of application. Longer runs or a higher difference in temperature require several expansion joints or the telescope section as explained on page no. 18 of this catalog. When in doubt please consult the factory. For arrangements of the fixpoints refer to sketch 1-3. The rest of the Powerail is mounted in sliding hangers.

Feeding

Expansion joints do not interrupt electrical power, so there is no need for an extra feeding. Expansion joints do not influence the voltage drop of a system.

Current collector

No special or extra collector required.

Mounting

The expansion joint section is installed on sliding hangers in the center between two fix points.

The gap dimensions «a» depends on the ambient temperature during installation. See adjacent diagram and example.

Example: Temperature 18° C

«a» = 50 mm

1	Collector	SKN 5/40-1 HS	257 140
1	Tow arm	KWS	250 380

(1) Rest of powerail
to be installed with sliding hangers

Power supply with support rail for moving machinery

like drilling machines, grinders, screw drivers etc. along assembly lines or above work benches in any type of plant.

No power cables on the floor to cause accidents and no obstruction to personnel by trailing cables.

Containers or baskets carrying bolts and nuts or other hardware for the assembling work can also be supported from and pushed along the carrier rail.

General

The KTW-System consists of a galvanized C-track taking the carrier trolleys or other hook-up elements and the Enclosed Powerail for power supply.

The support carrier is supplied with an attachment plate. Electrical plugs, fuses etc. can be fixed to the plate as per customers' requirements. The carrier is mechanically connected to the collector by a hinge and moved manually. C-track and Powerail are fixed to a support angle.

Powerail

Types KBSL or KSLT (40-200A) are used as power supply with appropriate collector (max. 40 A).

Support rail

corresponds to C-track, cat. 8a, page 2, galvanized.

Support distance

depends on mechanical stress. The max. support distance is 2 m considering a load capacity of 50 kg between hangers. For higher loads the support distance must be reduced correspondingly.

Other combinations are possible, refer to cat. 3a (LSV) or 4b (VKL).

Engineering Data:

Powerail KBSL-KSLT

40 A (100% DF)	copper conductor 10 mm ²
60 A (100% DF)	copper conductor 15 mm ²
100 A (100% DF)	copper conductor 25 mm ²
140 A (100% DF)	copper conductor 35 mm ²
200 A (80% DF)	copper conductor 50 mm ²

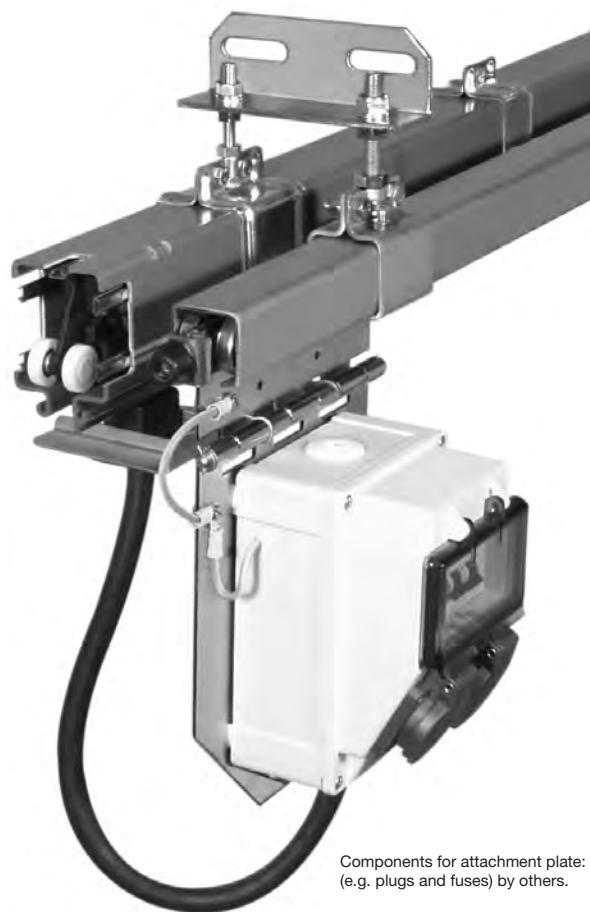

Voltage rating:	up to 600 V
No. of conductors:	4 & 5
Std. sections:	4 m
Support distance:	variable up to 2 m
Temperature resistance:	-30° C/+60° C
Collector rating:	40 A & multiple (60% DF)
Weight:	1.65 up to 3.35 kgs/m (see page 4)

C-track S 2

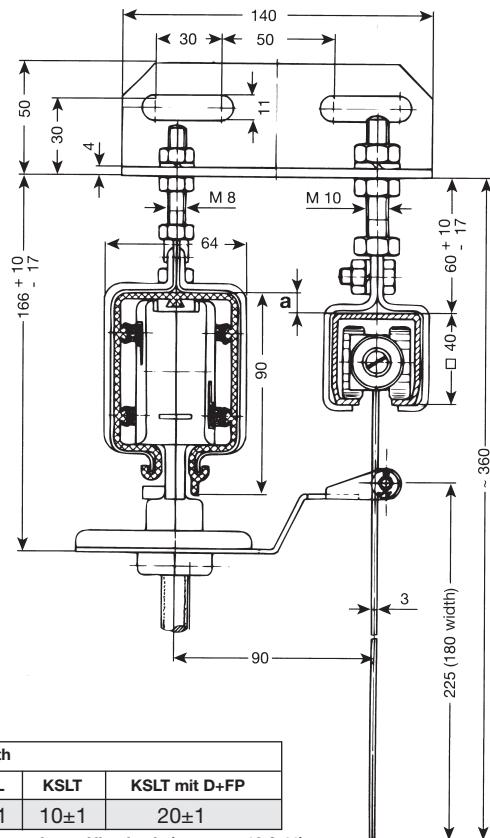

Section modulus Wx:	3.1 cm ³
Moment of inertia:	6.7 cm ⁴
Material:	Galvanized steel
Std. sections:	4 m
Support distance:	variable up to 2 m
Weight:	2.5 kgs/m

Carrier Trolley

Carrying capacity:	up to 50 kgs
Weight:	approx. 1.5 kgs

Components for attachment plate:
(e.g. plugs and fuses) by others.

Powerail for the current supply of a hangar crane.

⁽¹⁾ Adjust standard gauge during installation.

QUESTIONNAIRE

Company: _____

Date: _____

Tel: _____

Fax: _____

E-Mail: _____

Internet: (URL) _____

1. Number of powerail installations: _____

2. Type of equipment to be powered: _____

3. Operating voltage: _____ Volts, Phases: _____, Frequency: _____ Hz
Three phase voltage: AC voltage: DC voltage:

4. Track length: _____

5. Number of powerails: _____ (neutral: _____ control rails: _____ ground rail: _____)

6. Mounted position of powerail:

- Powerail pendant, collector cable facing to the bottom
- Support distance _____ m (max. 2 m)
- Other: _____

7. Number of consumers per system: _____

8. Indoor: Outdoor:

9. Other operating conditions (humidity, dust, chemical influence etc.)

10. Ambient temperature: _____ °C min. _____ °C max.

11. Position and number of feeding points and isolating sections⁽¹⁾: _____

12. Position and number of isolating sections (e.g. for maintenance): _____

13. Brackets required: yes no c/c distance beam /Powerail

14. How are the rails laid out? (Please provide sketch): _____

15. Travel speed: _____

16. Power consumption of the individual consumer loads:
(Please consult table on reverse side)

17. Max. Voltage drop from the powerail feed point to the consumer considering starting current:
3% or _____ % referring to nominal voltage

Remarks: _____

⁽¹⁾ For curved tracks, powerail with isolating sections etc., we require sketches to enable us to prepare a quotation.
